

ADRIAN ŻYŁA

During my studies, I gained knowledge in object-oriented programming in the .NET environment, using C# language, creating desktop applications in WPF, and creating databases in SQL. I am also currently expanding my knowledge in web technologies by learning HTML, CSS, JavaScript and ASP.NET Core MVC. I am always eager to learn new technologies and tools that will allow me to broaden my horizons as a programmer. I hope to have an internship that would allow me to develop my skills.

EDUCATION

oct 2021 - current

AGH University of Science and Technology

Computer Science and Econometrics – 2nd year, 1st cycle

EXPERIENCE

AGH Student Council

oct 2021 - sep 2022

- conducting online advertising campaigns (on Facebook, Instagram, TikTok)
- organizing cultural events for 200-500 participants
- participation in trainings developing soft skills (teamwork, time management, public speaking, working under time pressure)

Fundacja Młodych Liderów

apr 2019 - oct 2021

- independent coordination of an event with over 500 participants
- assigning tasks and managing a group of 20 people
- event organization
- soft skills trainings

PROJECTS

Student Helper Application

The application is a simple and intuitive tool that helps with organizing work and increasing productivity. It includes features such as a to-do list, notebook, and Pomodoro timer. Users can customize the timer settings, edit notes, and save data to an XML file. I learned how to create applications according to the Model-View-ViewModel design pattern using this application.

Team Management Application

The application is a tool for managing a team. You can create a new team from scratch or import an existing team from an XML file. Once your team is set up, you can easily add, clone, and edit members, change their status, or sort the list according to your needs. The application was developed using the MVVM design pattern, which ensures a clean and efficient architecture.
